🏗️ NahamStore: Setup

**Intro**

The first thing that we must do is setting up our attacker machine adding an entry into our
/etc/hosts with the IP Address and the domain name.

```
  GNU nano 8.7
127.0.0.1        localhost
127.0.1.1        kali.kali        kali

# The following lines are desirable for IPv6 capable hosts
::1      localhost ip6-localhost ip6-loopback
ff02::1 ip6-allnodes
ff02::2 ip6-allrouters
10.65.170.203    nahamstore.thm
```

If we access to the domain name "*nahamstore.thm*" on our browser we must see this

Now we are ready to continue
